THREAT: HIGH

2026-05-18 – 2026-06-01 · Digital Safety Intelligence

OVERVIEW

75/100

MISOGYNY INDEX

76/100

MEDIA SCORE

40/100

COMMUNITY

36 pt

SCORE GAP

Kenya's misogyny index holds steady at 75—a deceptively calm surface masking violent turbulence beneath. While the index dipped marginally (-1 point), this reflects a media-social media chasm: mainstream outlets are screaming (76), but online communities are downplaying or justifying violence (40). The data gap is itself the danger: zero recorded cases this period suggests intelligence collection breakdown, not safety.

WHAT THE SCANNER CAUGHT

01

- **BBC/The Star Duplication**: Five scanned articles, three unique stories, heavy repetition of BBC's misogyny framing suggests coordinated international concern but potential local media fatigue or censorship gaps.

02

1,639 Women in a Decade: The Star's aggregate data (10% surge, >1,000 femicides in 10 years) anchors the scale of the crisis, yet generates zero mobilizing social response—data dissociation from action.

03

Method Documentation: "Stabbing, strangulation, blunt force" article catalogs violence taxonomy; this clinical framing may obscure the relational/intimate perpetrator context driving most Kenya femicides.

MISOGYNY OF THE DAY — PATTERN

INTIMATE PARTNER VIOLENCE

PUBLIC SEXUAL SHAMING

POSTHUMOUS VICTIM ERASURE

The Misogyny of the Day posts reveal a five-stage invalidation pipeline: (1) victim-blaming (she "indulged emotions," had risky "background"), (2) perpetrator erasure (focus on women's choices), (3) sexual entitlement normalization ("children feel sweetness"), (4) parental blame (parents "get stroke or upset"), (5) community silence (equivalent to no crime). The deluge of posts creates a false sense of scale.

TECH-FACILITATED VIOLENCE

5

cases with tech-facilitated elements

BBC360%

the-star.co.240%

Five tech-facilitated cases identified this period across "online platforms" and "social media," though specificity is sparse. X and Facebook are the primary amplification vectors for misogynist narratives *during* femicide cases—comments appear within days of murders, suggesting real-time coordination.

COMMUNITY PULSE

76

MEDIA SCORE

vs

40

COMMUNITY

36-point disconnect: media naming crisis, community negotiating it

Media coverage score76/100

Community sentiment40/100

Online discourse is fractured: women-led protest movements (Mombasa march, May 25) exist in parallel to male-dominated comment spaces that neutralize or invert feminist messaging. Verified accounts (the "political scientist") weaponize human rights language to justify misogyny, indicating ideological capture. The social media score of 40

CONFIDENTIAL · INTERNAL USE ONLY

1 / 2

femsaidiakenya.org · A woman is killed every 47 hours in Kenya.

THE INSIGHT

Kenya's femicide crisis is no longer a data problem—it is a narrative warfare problem. The machinery is working with precision: women are killed (1,639 in a decade), murders are documented by international and domestic media (BBC, The Star), but the kill chain is completed not by enforcement failure but by coordinated social media delegitimization that reframes murders as consequences of female behavior. The 36-point misogyny index gap between news and social is not evidence
